Specifying a valid BCP 47 language helps screen readers announce text properly. Learn more. Image elements have [alt] attributes Informative elements should aim for short, descriptive alternate text. Decorative elements can be ignored with an empty alt attribute. Learn more. Form elements have associated labels Labels ensure that form controls are announced properly by assistive technologies, like screen readers. Learn more. Links have a discernible name Link text (and alternate text for images, when used as links) that is discernible, unique, and focusable improves the navigation experience for screen reader users. Learn more. Lists contain only <1i> elements and script supporting elements (<script> and <template>). Screen readers have a specific way of announcing lists. Ensuring proper list structure aids screen reader output. Learn more List items (<1i>) are contained within or parent elements Screen readers require list items (<|i>) to be contained within a parent '<u|> or '<o|> to be announced properly. Learn more. [user-scalable="no"] is not used in the <meta name="viewport"> element and the [maximum-scale] attribute is not less than 5 Disabling zooming is problematic for users with low vision who rely on screen magnification to properly see the contents of a web page. Learn more. Not applicable (27) raccesskev1 values are unique Access keys let users quickly focus a part of the page. For proper navigation, each access key must be unique. Learn more. [aria-*] attributes match their roles Each ARIA 'role' supports a specific subset of 'aria-*' attributes. Mismatching these invalidates the 'aria-*' attributes. Learn more [aria-hidden="true"] elements do not contain focusable descendents Focusable descendents within an `[aria-hidden="true"]` element prevent those interactive elements from being available to users of assistive technologies like screen readers. Learn more. ARIA input fields have accessible names When an input field doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. Learn more [role]s have all required [aria-*] attributes Some ARIA roles have required attributes that describe the state of the element to screen readers. Learn more. Elements with an ARIA [role] that require children to contain a specific [role] have all required children. Some ARIA parent roles must contain specific child roles to perform their intended accessibility functions. Learn more. [role]s are contained by their required parent element Some ARIA child roles must be contained by specific parent roles to properly perform their intended accessibility functions. Learn more. [role] values are valid ARIA roles must have valid values in order to perform their intended accessibility functions. Learn more. ARIA toggle fields have accessible names When a toggle field doesn't have an accessible name, screen readers announce it with a generic name, making it unusable

for users who rely on screen readers. Learn more.

| | [aria-*] attributes have valid values | ^ |
|--|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|
| | Assistive technologies, like screen readers, can't interpret ARIA attributes with invalid values. <u>Learn more</u> . | |
| | [aria-*] attributes are valid and not misspelled | ^ |
| | Assistive technologies, like screen readers, can't interpret ARIA attributes with invalid names. <u>Learn more</u> . | |
| | Buttons have an accessible name | ^ |
| | When a button doesn't have an accessible name, screen readers announce it as "button", making it unusable for users who rely on screen readers. <u>Learn more</u> . | |
| | <pre><dl>'s contain only properly-ordered <dt> and <dd> groups, <script>, <template> or <div> elements.</pre></th><th>^</th></tr><tr><th></th><th>When definition lists are not properly marked up, screen readers may produce confusing or inaccurate output. <u>Learn more</u>.</th><th></th></tr><tr><th></th><th>Definition list items are wrapped in <dl> elements</th><th>^</th></tr><tr><th></th><th>Definition list items ('<dt>' and '<dd>') must be wrapped in a parent '<dl>' element to ensure that screen readers can properly announce them. <u>Learn more</u>.</th><th></th></tr><tr><th></th><th>[id] attributes on active, focusable elements are unique</th><th>^</th></tr><tr><th></th><th>All focusable elements must have a unique 'id' to ensure that they're visible to assistive technologies. <u>Learn more</u>.</th><th></th></tr><tr><th></th><th>No form fields have multiple labels</th><th>^</th></tr><tr><th></th><th>Form fields with multiple labels can be confusingly announced by assistive technologies like screen readers which use either the first, the last, or all of the labels. <u>Learn more</u>.</th><th></th></tr><tr><th></th><th><frame> or <iframe> elements have a title</th><th>^</th></tr><tr><th></th><th>Screen reader users rely on frame titles to describe the contents of frames. <u>Learn more</u>.</th><th></th></tr><tr><th></th><th><pre><input type="image"> elements have [alt] text</pre></th><th>^</th></tr><tr><th></th><th>When an image is being used as an `<input>` button, providing alternative text can help screen reader users understand the purpose of the button. <u>Learn more</u>.</th><th></th></tr><tr><th></th><th>Presentational elements avoid using , <caption> or the [summary] attribute.</th><th>^</th></tr><tr><th></th><th>A table being used for layout purposes should not include data elements, such as the thor caption elements or the summary attribute, because this can create a confusing experience for screen reader users. <u>Learn more</u>.</th><th></th></tr><tr><th></th><th>The document does not use <meta http-equiv="refresh"></th><th>^</th></tr><tr><th></th><th>Users do not expect a page to refresh automatically, and doing so will move focus back to the top of the page. This may create a frustrating or confusing experience. <u>Learn more</u>.</th><th></th></tr><tr><th></th><th><pre><object> elements have [alt] text</pre></th><th>^</th></tr><tr><th></th><th>Screen readers cannot translate non-text content. Adding all text to `<object>` elements helps screen readers convey meaning to users. Learn more.</th><th></th></tr><tr><th></th><th>No element has a [tabindex] value greater than 0</th><th>^</th></tr><tr><th></th><th>A value greater than 0 implies an explicit navigation ordering. Although technically valid, this often creates frustrating experiences for users who rely on assistive technologies. <u>Learn more</u>.</th><th></th></tr><tr><th></th><th>Cells in a element that use the [headers] attribute refer to table cells within the same table.</th><th>^</th></tr><tr><th></th><th>Screen readers have features to make navigating tables easier. Ensuring `` cells using the `[headers]` attribute only refer to other cells in the same table may improve the experience for screen reader users. <u>Learn more</u>.</th><th></th></tr><tr><th></th><th><pre> elements and elements with [role="columnheader"/"rowheader"] have data cells they describe.</pre></th><th>^</th></tr><tr><th></th><th>Screen readers have features to make navigating tables easier. Ensuring table headers always refer to some set of cells may improve the experience for screen reader users. <u>Learn more</u>.</th><th></th></tr><tr><th>•</th><th>[lang] attributes have a valid value</th><th>^</th></tr><tr><th></th><th>Specifying a valid <u>BCP 47 language</u> on elements helps ensure that text is pronounced correctly by a screen reader. <u>Learn more</u>.</th><th></th></tr><tr><th></th><th><pre><video> elements contain a <track> element with [kind="captions"]</pre></th><th>_</th></tr></tbody></table></script></dd></dt></dl></pre> | |

When a video provides a caption it is easier for deaf and hearing impaired users to access its information. Learn more.

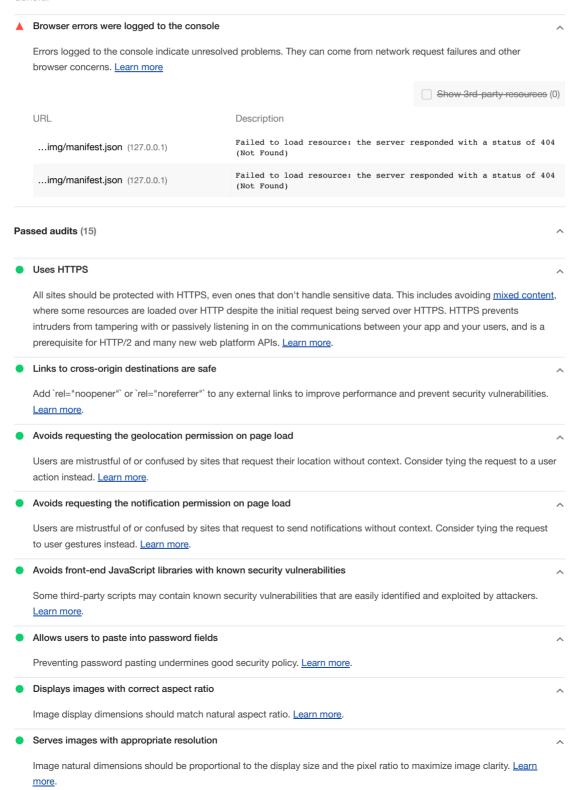

<video> elements contain a <track> element with [kind="description"]

Audio descriptions provide relevant information for videos that dialogue cannot, such as facial expressions and scenes. <u>Learn more</u>.

Best Practices

General

| • | Page has the HTML doctype | ^ |
|----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|
| | Specifying a doctype prevents the browser from switching to quirks-mode. <u>Learn more</u> . | |
| • | Properly defines charset | ^ |
| | A character encoding declaration is required. It can be done with a ` <meta/> ` tag in the first 1024 bytes of the HTML or in the Content-Type HTTP response header. <u>Learn more</u> . | |
| • | Avoids unload event listeners | ^ |
| | The `unload` event does not fire reliably and listening for it can prevent browser optimizations like the Back-Forward Cache Consider using the `pagehide` or `visibilitychange` events instead. Learn More | |
| • | Avoids Application Cache | ^ |
| | Application Cache is deprecated. <u>Learn more</u> . | |
| • | Detected JavaScript libraries | ^ |
| | All front-end JavaScript libraries detected on the page. <u>Learn more</u> . | |
| • | Avoids deprecated APIs | ^ |
| | Deprecated APIs will eventually be removed from the browser. <u>Learn more</u> . | |
| • | Page has valid source maps | ^ |
| | Source maps translate minified code to the original source code. This helps developers debug in production. In addition, Lighthouse is able to provide further insights. Consider deploying source maps to take advantage of these benefits. Learn more. | |
| No | t applicable (1) | ^ |
| • | Fonts with font-display: optional are preloaded | ^ |
| | Preload `optional` fonts so first-time visitors may use them. Learn More | |
| | | |

SEO

These checks ensure that your page is optimized for search engine results ranking. There are additional factors Lighthouse does not check that may affect your search ranking. <u>Learn more</u>.

Additional items to manually check (1) — Run these additional validators on your site to check additional SEO best practices.

Structured data is valid

Run the Structured Data Testing Tool and the Structured Data Linter to validate structured data. Learn more.

Passed audits (12)

Has a <meta name="viewport"> tag with width or initial-scale

Add a `<meta name="viewport"> `tag to optimize your app for mobile screens. Learn more.

Document has a <title> element

The title gives screen reader users an overview of the page, and search engine users rely on it heavily to determine if a page is relevant to their search. <u>Learn more</u>.

Document has a meta description

Meta descriptions may be included in search results to concisely summarize page content. <u>Learn more</u>.

| • | Page has successful HTTP status co- | de | | | ^ |
|----|-----------------------------------------------------------------------------------------|-------------------------------------------------|----------------------------|------------------------------------|-----|
| | Pages with unsuccessful HTTP status | codes may not be indexed pro | perly. <u>Learn more</u> . | | |
| • | Links have descriptive text | | | | ^ |
| | Descriptive link text helps search engines understand your content. <u>Learn more</u> . | | | | |
| • | Links are crawlable | | | | ^ |
| | Search engines may use 'href' attribute to an appropriate destination, so more | | | attribute of anchor elements links | |
| • | Page isn't blocked from indexing | | | | ^ |
| | Search engines are unable to include y | your pages in search results if t | hey don't have perm | ission to crawl them. Learn more | F |
| • | Image elements have [alt] attributes | s | | | ^ |
| | Informative elements should aim for stattribute. <u>Learn more</u> . | hort, descriptive alternate text. | Decorative elements | can be ignored with an empty al | t |
| • | Document has a valid hreflang | | | | ^ |
| | hreflang links tell search engines what <u>Learn more</u> . | version of a page they should | list in search results | for a given language or region. | |
| • | Document uses legible font sizes - | 83.85% legible text | | | ^ |
| | Font sizes less than 12px are too small to have >60% of page text ≥12px. Less | = ' | ile visitors to "pinch | to zoom" in order to read. Strive | |
| | | | | ✓ Show 3rd-party resources | (1) |

Progressive Web App

These checks validate the aspects of a Progressive Web App. <u>Learn more</u>.

Fast and reliable

Page load is fast enough on mobile networks

A fast page load over a cellular network ensures a good mobile user experience. Learn more. Current page does not respond with a 200 when offline If you're building a Progressive Web App, consider using a service worker so that your app can work offline. Learn more. start_url does not respond with a 200 when offline No usable web app manifest found on page. A service worker enables your web app to be reliable in unpredictable network conditions. Learn more. Installable Uses HTTPS All sites should be protected with HTTPS, even ones that don't handle sensitive data. This includes avoiding mixed content, where some resources are loaded over HTTP despite the initial request being served over HTTPS. HTTPS prevents intruders from tampering with or passively listening in on the communications between your app and your users, and is a prerequisite for HTTP/2 and many new web platform APIs. Learn more. ▲ Does not register a service worker that controls page and start url The service worker is the technology that enables your app to use many Progressive Web App features, such as offline, add to homescreen, and push notifications. Learn more. ▲ Web app manifest does not meet the installability requirements Failures: No manifest was fetched. Browsers can proactively prompt users to add your app to their homescreen, which can lead to higher engagement. Learn more. **PWA Optimized** Does not redirect HTTP traffic to HTTPS If you've already set up HTTPS, make sure that you redirect all HTTP traffic to HTTPS in order to enable secure web features for all your users. Learn more. Is not configured for a custom splash screen Failures: No manifest was fetched. A themed splash screen ensures a high-quality experience when users launch your app from their homescreens. Learn Does not set a theme color for the address bar. Failures: No manifest was fetched. The browser address bar can be themed to match your site. Learn more. Content is sized correctly for the viewport If the width of your app's content doesn't match the width of the viewport, your app might not be optimized for mobile screens. Learn more. Has a <meta name="viewport"> tag with width or initial-scale Add a `<meta name="viewport">` tag to optimize your app for mobile screens. Learn more. Contains some content when JavaScript is not available Your app should display some content when JavaScript is disabled, even if it's just a warning to the user that JavaScript is required to use the app. Learn more. Provides a valid apple-touch-icon For ideal appearance on iOS when users add a progressive web app to the home screen, define an 'apple-touch-icon'. It must point to a non-transparent 192px (or 180px) square PNG. Learn More. Manifest doesn't have a maskable icon No manifest was fetched A maskable icon ensures that the image fills the entire shape without being letterboxed when installing the app on a device. Learn more. Additional items to manually check (3) - These checks are required by the baseline PWA Checklist but are not

automatically checked by Lighthouse. They do not affect your score but it's important that you verify them manually.

Site works cross-browser

To reach the most number of users, sites should work across every major browser. Learn more.

Page transitions don't feel like they block on the network

Transitions should feel snappy as you tap around, even on a slow network. This experience is key to a user's perception of performance. <u>Learn more</u>.

Each page has a URL

Ensure individual pages are deep linkable via URL and that URLs are unique for the purpose of shareability on social media. <u>Learn more.</u>
